elasticity theory applications and numerics fifth edition continues its market leading tradition of concisely presenting and developing the linear theory of elasticity moving from solution methodologies formulations and strategies into applications of contemporary interest such as fracture mechanics anisotropic and composite materials micromechanics nonhomogeneous graded materials and computational methods developed for a one or two semester graduate elasticity course this new edition has been revised with new worked examples exercises and new or expanded coverage in recent areas of interest using matlab software numerical activities in the text are integrated with analytical problem solutions and new symbolic software has now been introduced includes a thorough yet concise introduction to linear elasticity theory and applications presents detailed solutions to problems of nonhomogeneous graded materials features a comparison of elasticity solutions with elementary theory experimental data and numerical simulations provides hands on practice with additional matlab programming resources for students at elsevier.com/books-and-journals/book-companion/9780443132452 offers teaching support including a full solutions manual and lecture slides available for request by qualified instructors at educate@elsevier.com 9780443132452

progress in heat and mass transfer volume 5 heat and mass transfer in rheologically complex fluids compiles selected papers presented at the international seminar held in herceg novi yugoslavia on september 8 12 1970 this book discusses the continuum foundation of rheology transport phenomena in turbulent flow of rheologically complex fluids and heat transfer effects in flowing polymers the thixotropic effects in viscoelastic media non equilibrium thermodynamics and rheology of viscoelastic fluids and flow instability due to convective time changes of consistency are also elaborated this publication also covers the prediction method for turbulent momentum and heat transfer in viscous non newtonian liquids methods for determining thermal properties of anisotropic systems and convection in ferromagnetic fluid due to magneto caloric effect this volume is beneficial to students and researchers interested in the heat and mass transfer in rheologically complex fluids
